OFDM

$\rightarrow$  Subcarriers

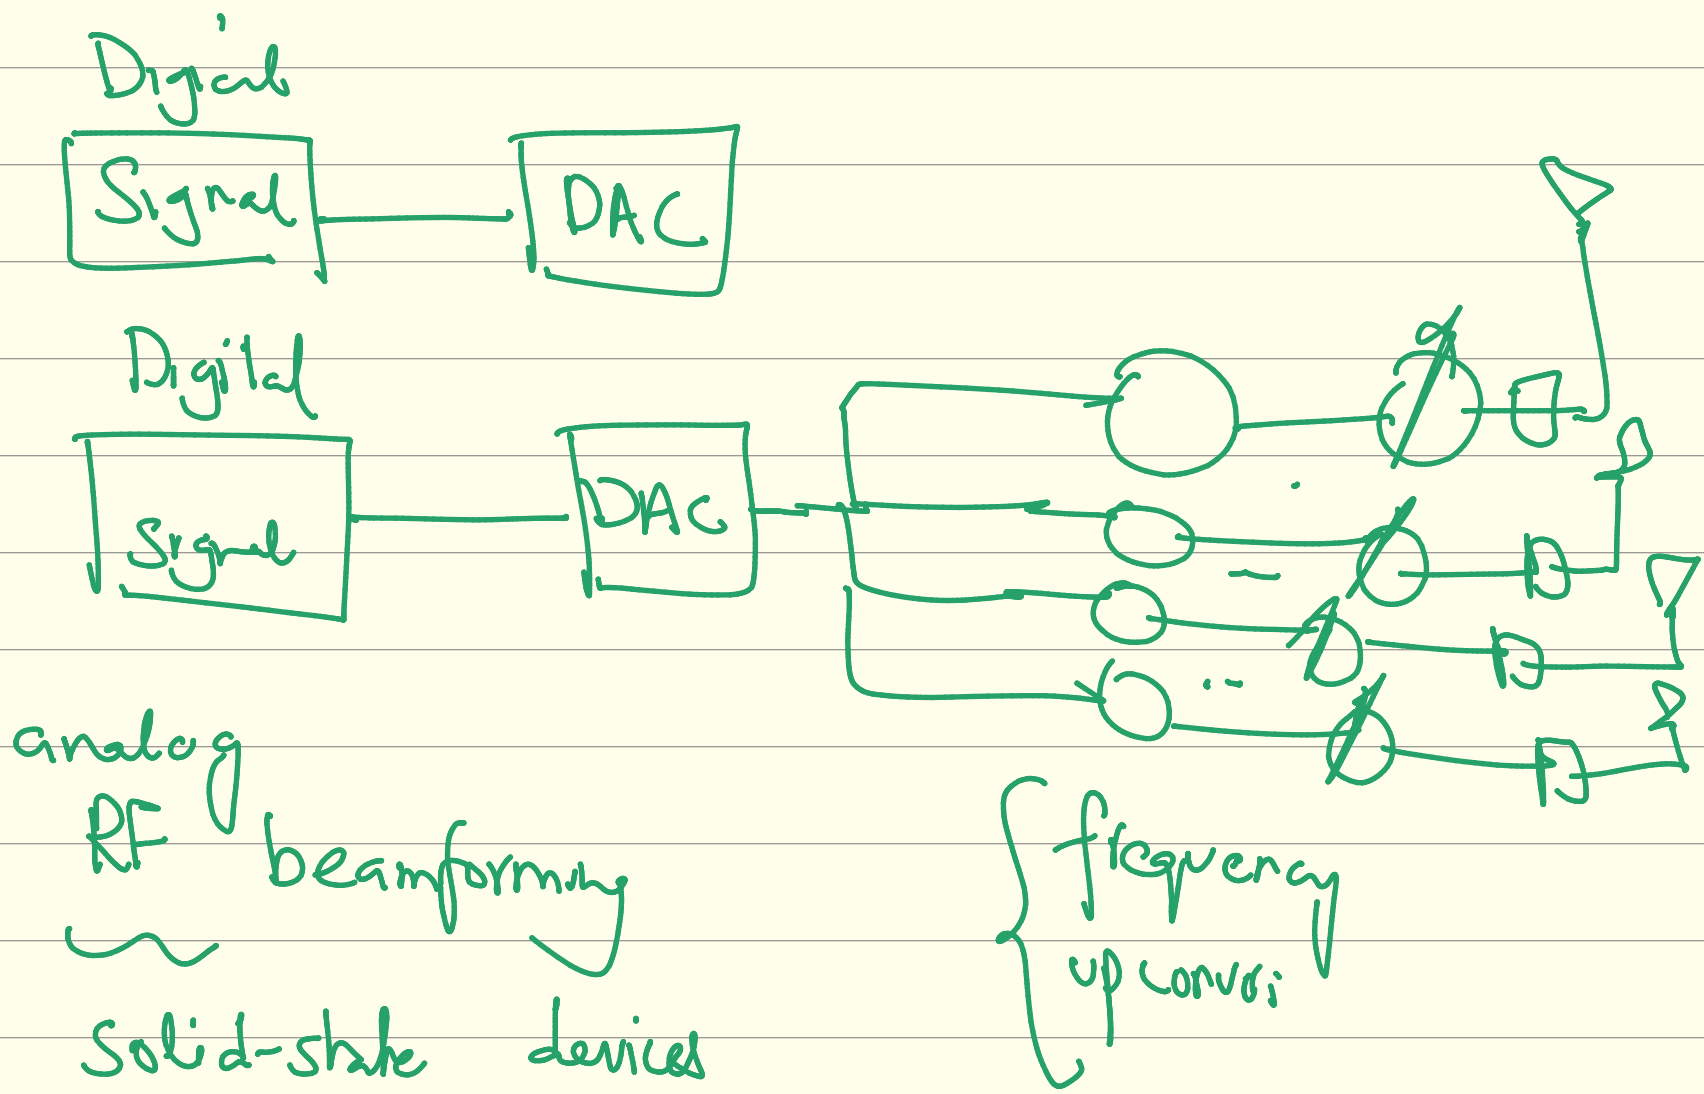

Received  
Reliably

MIMO

$\Rightarrow$   
 $\uparrow$

$S/N$   $S/I$   
 $\uparrow$  SINR  
Channel Capacity

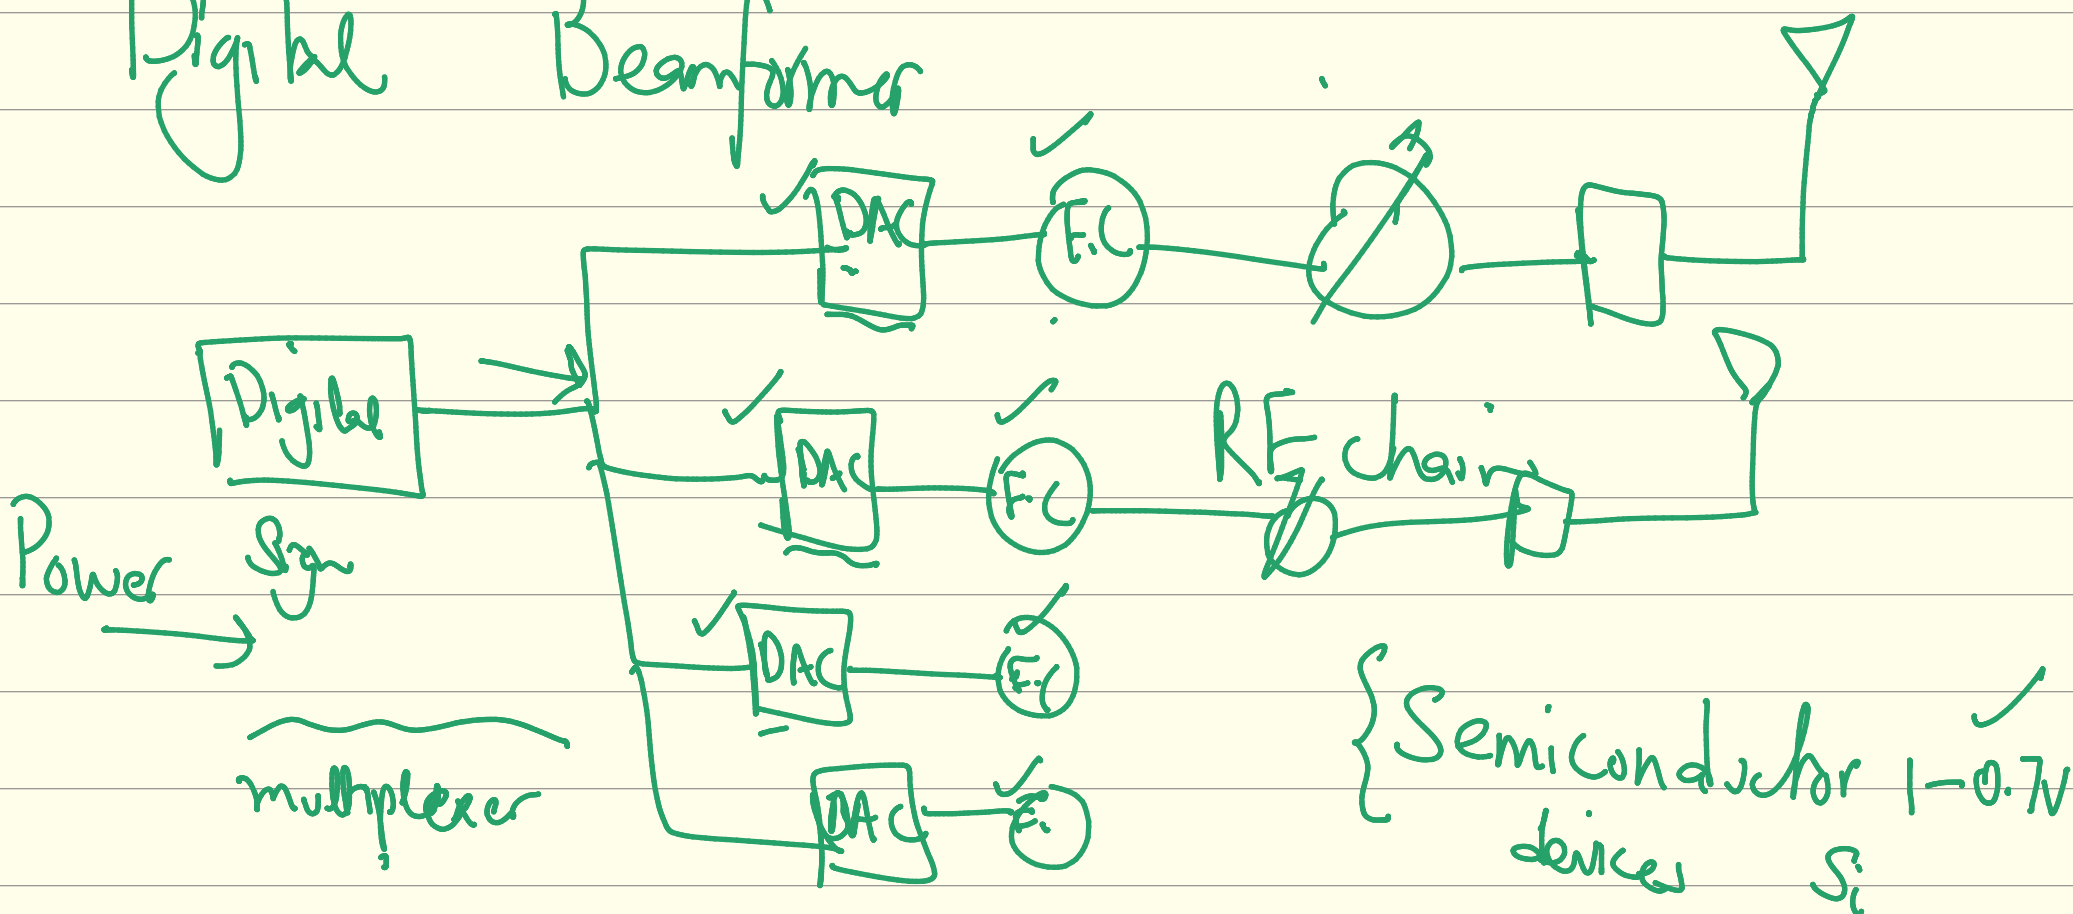

# Analog Beamforming

Beamformer gets complex & bulky, power hungry

↑ 1 dBm  
 8 streams  
 lossless → 1/8 dBm inefficient

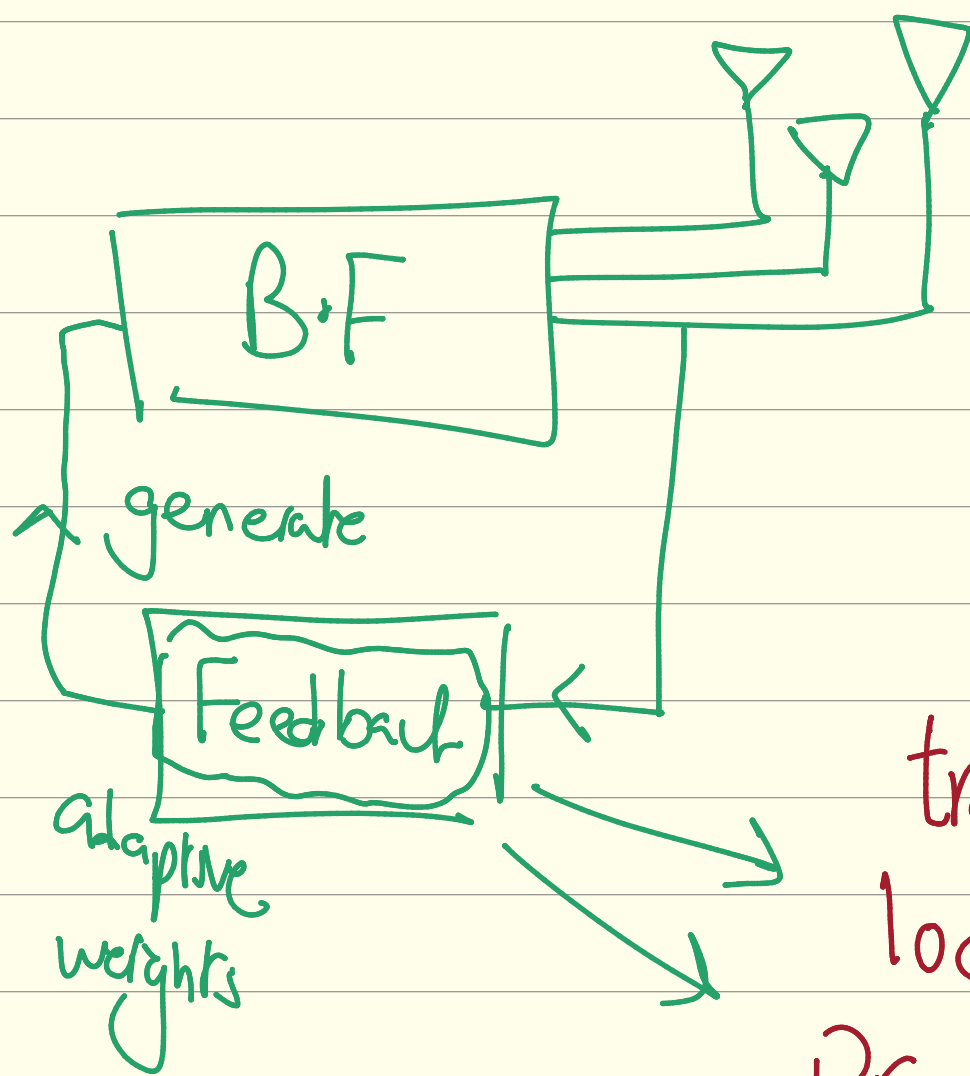

# Digital Beamformer

Mostly (used in RF and pre-wave  
< 7 GHz)  
each RF chain has their own components!!

64x64  
8x8 → 64 RF chains

mmWave  
→ 512x512
